

African-American Museum and Library
Houston, Texas

The historic Gregory Lincoln School, built in 1925, was renovated and redeveloped as a museum and library to display African-American culture through history. Keeping the exterior load bearing brick walls intact, the ground floor, second floor, and roof framing was gutted and replaced with in-fill floors supported on independent foundations and framed with structural steel. Only the roof was framed into the exterior walls using special masonry anchors with reduced values to account for the age of the brick walls. The restoration includes a museum, library and archives, and a Black Box Theater. The African American Library is recognized as a historical site for the City of Houston as well as the State of Texas.

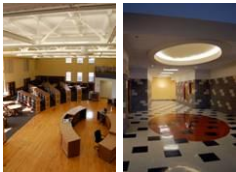

Living Word Evangelical Lutheran Church Addition
Katy, Texas

This is a new 7,000 SF single story wing that will house education for Pre-K children. It is a gabled rectangular-shaped building clear spanned using prefabricated wood trusses in the assembly areas and traditional stud and joist framed in the classroom and office areas. The porte cocheres at the two entrances are steel framed gable shaped canopies. The building and porte cocheres have a tongue and groove wood deck with a standing seam roof cover.

Reagan High School
Houston, Texas

This challenging project upgraded the existing high school facility by retaining the distinctive existing main building, demolishing the additions and replacing them with a new classroom building, gymnasium building, parking garage, and cafeteria building. The classroom building and the gymnasium are 2-story steel-framed buildings using open web steel joists and a concrete deck for the floor system, and joists and beams with a metal deck for the roof framing; whereas the cafeteria building is a tall single story steel-framed structure also framed with open-web joists and steel beams and columns. The 2-story parking garage is a specially designed and detailed precast concrete framed structure with recessed connections as to enable them to be grouted and free of maintenance.
